

PRODUCTION OPTIMISATION

In **production optimisation**, the specific focus is on the efficient design of production processes. EDAG Production Solutions provides complete developments for sustainable production systems, and is the ideal interface between product development and plant construction.

YOUR GLOBAL MOBILITY ENGINEERING EXPERTS

Production optimisation

Our experts have many years' experience in fully integrated process planning, all of which we place at our customers' disposal, as well as offering **production optimisation** for high-quality industrial production.

The experts at EDAG PS take on the possible challenges in their production goals:

- Growth targets
- Cost pressure
- Supply shortages
- Ratio for rejects and rectification

Our experts' 2-step solution

First of all, we carry out an on-site inspection at your premises and look at the main points in your processes. Following this, we then carry out a process analysis including an evaluation. None of which we charge you for. In the next step, we present our proposal for **production optimisation** in the form of a quotation with price and date proposals.

Cost optimisation

Optimisation of the product costs

- Reduction of parts/tools
- Reduction of cost of materials
- Tool complexity
- Product complexity
- Material change-over
- Ratio of carry-over parts

Optimisation of process costs

- Annual savings
- Error rate/quality of first run
- Productivity
- Capacities
- Growth
- Flexibility

Your advantages

We tailor the experts' solution to your needs:

- Free potential assessment - including product evaluation and joint production inspection
- Working out and implementing an individual package of measures
